

Consumers Energy Count on Us®

Improved reliability coming your way.

We're modernizing Michigan's natural gas system to ensure safe, reliable delivery of natural gas to you.

Here's what you need to know:

Please Note. Crews need access to the EXTERIOR of your property and may need access INSIDE your home or business to locate sewer lines or relocate your meter. Crew members doing this work will always carry Consumers Energy identification.

Preparation. After we mark sewer lines, to avoid property damage, **please mark your underground items** to the best of your ability. Use paint, flags or stakes to mark items such as sprinklers, invisible dog fences, outdoor lighting and drainage lines. **Do not remove any flags or marks until after restoration** so that we can safely and more quickly complete our work.

Construction. Crews will perform underground work to install new, upgraded pipeline. Natural gas service will be interrupted for less than an hour. When service is restored, you may need to relight appliance pilot lights. If you need our assistance with this, we are happy to help. We will leave a door hanger with instructions to call us at 800-477-5050 to make a request.

Restoration. When our work is complete, all roadways, sidewalks and other areas affected by our work will be restored. Some property restoration may be delayed because of weather conditions and other events. If delays happen, we will return as soon as possible to complete the work.

Keeping your energy safe and reliable.
